

Your Power

Your Choice

Go Green... with CUSTOMER CHOICE

The Wakefield Municipal Gas and Light Department (WMGLD) is letting customers reduce their carbon footprint by having a say in the source of their electricity. The WMGLD portfolio is already almost 50% non-carbon emitting and is on track to meet Massachusetts' goal of 50% non-carbon emitting resources by 2030, 75% by 2040, and 100% by 2050. Customers who choose our new CUSTOMER CHOICE program, can be sure that all of their electricity comes from non-carbon emitting sources like solar, wind, hydro and other clean sources.

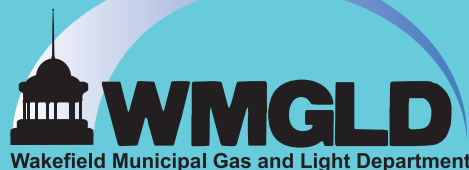

Here's how it works:

WMGLD customers can choose to pay an additional \$.0184 per kilowatt-hour for the kilowatt hours they use and the department will purchase Massachusetts Class 1 Renewable Energy Credits (REC) to ensure that 100% of their energy supply is NON-CARBON EMITTING. Massachusetts Class 1 RECs support development of new renewable energy resources. The REC purchases through the CUSTOMER CHOICE program are above and beyond WMGLD's current requirements.

One hundred percent of the funds collected through the CUSTOMER CHOICE program will be used for the purchase and retirement of renewable energy credit certificates, ensuring that 100% of your supply is carbon free. For the average customers who uses 750 kilowatt-hours each month, that's an additional \$17 per month.

While customers can not select each individual source that will be delivered to their homes, they can be assured that the energy they receive is fully derived from non-carbon emitting sources. That's a great step in reducing our carbon footprint!

By signing up for Customer Choice you are helping to make a positive contribution to our environment by supporting the development of cleaner, renewable energy resources. Your participation in the program helps you invest in the future of our planet. With Customer Choice, you pay a few extra dollars on your electric bill each month to help support renewable energy sources, such as wind and solar. The goal is simple: to work together to reduce our dependence on fossil fuels.
